

Chemicals for Plant Disease Control at Home

Kevin Ong*

For consumers, finding the right product to control a plant disease can be confusing, especially when a specific chemical is recommended for controlling the disease, but is sold under a variety of trade names.

Plant experts often recommend a chemical by its common name, but not all product labels list the ingredients that way, using chemical terminology instead.

Another problem is the declining number of disease-control products available in small packages. Consumers forced to buy larger packages than needed are face with problems, such as:

- Instructions on large packages that give rates in quantity per acre instead of quantity per gallon.
- Large containers that cost more even though the cost per unit used is less.
- Inadequate space to safely store excess chemicals.

To help consumers find the products they need, this publication lists products by active ingredient, product name and brand. The list is based on a survey of chemical companies with products commonly found in Texas retail stores.

The products listed here are currently being formulated; discontinued products and formulations are often available at retail outlets until supplies are exhausted. This list does not include products normally packaged for agricultural use,

even though some may be available in some retail outlets.

Homeowners can determine what to buy if they understand information on product labels. Every product label shows the name of the active ingredient, which is the chemical that acts against the disease pathogen. The law requires that each registered product label also includes the chemical terminology of the active ingredient. This terminology describes the chemical makeup of the compound. However, some products—usually natural products—are exempt from Environmental Protection Agency registration because they are classified as minimum risk pesticides. These products may not have complete information on their labels.

Because chemical names are long and difficult to pronounce, each chemical has been assigned an official common name which is easier for most people to use. Manufacturers are not required to put common names on labels, but some do.

Example:

Common name	Chemical name
Triadimefon	1-(4-chlorophenoxy)-3,3-dimethyl-1-(1H-1,2,4-triazol-1-yl)-butanone

Four tables are included in this publication to help homeowners and retailers distinguish among the products available:

- Table 1 lists common chemical names and the corresponding chemical name for each active ingredient.

*Assistant Professor and Extension Plant Pathologist, The Texas A&M University System

- Table 2 lists all trade names and manufacturers for each chemical. Combination products—those that contain more than one chemical—are included. In many cases, the additional chemicals are insecticides. Table 2 also indicates whether a product can be used on vegetables, fruits or turf/ornamentals (y = yes, n = no). Refer to the product labels for specific plants and instructions.
- Table 3 lists each product by company or brand name and types of plants the product can be used on. Refer to the product labels for specific plant types and use instructions. Table 3 also serves as a reference to the various products sold under different brand names.
- Table 4 lists the companies that formulate products under the various brand names

and their Web addresses. Sample labels and information about using products usually are available at a manufacturer's Web site.

In addition to chemical information, a product label should also contain a signal word (Caution, Warning or Danger) and other information on risks, safety and first aid, and proper use of the product.

This listing is provided as a general reference. Although every attempt is made to ensure that information is complete and accurate at the time of publication, some available products may have not been listed. The homeowner should READ THE LABEL for information on proper use for their specific situation and for safety information. For additional assistance, contact your local county Extension office.

Table 1. Plant disease control chemicals.

Common name	Chemical name
1. biological	living agent: bacteria/fungus
2. botanical	products derived from plants, typically oils
3. captan	N-trichloromethylthio-4-cyclohexene-1,2 dicarboximide
4. chlorothalonil	tetrachloroisophthalonitrile
5. copper	various chemical forms of copper compounds
6. fosetyl-al	aluminum tris(O-ethylphosphonate)
7. lime sulfur	calcium polysulfide
8. mancozeb	coordination product of zinc ion and manganese ethylene bisdithiocarbamate
9. maneb	manganese ethylene bisdithiocarbamate
10. myclobutanil	alpha-Butyl-alpha-(4-chlorophenyl)-1H-1,2,4-triazole-1-propanenitrile
11. neem	extracts from the neem tree (botanical)
12. PCNB	pentachloronitrobenzene
13. phosphorous acid salts	mono- and di-potassium salts of phosphorous acid
14. potassium bicarbonate	potassium bicarbonate
15. propaconazole	1-[[2(2,4-Dichlorophenyl)-4-propyl-1,3-dioxolan-2-yl]methyl]-1H-1,2,4-triazole
16. quarternary ammonium compound	various forms of N-alkyl ammonium chloride
17. streptomycin sulfate	streptomycin sulfate (antibiotic)
18. sulfur	sulfur
19. tebuconazole	alpha-(2-(4-Chlorophenyl)ethyl)-alpha-(1,1-dimethylethyl)-1H-1,2,4-triazole-1-ethanol
20. thiophanate methyl	dimethyl 4,4'-o-phenylenebis(3-thioallophanate)
21. triadimefon	1-(4-chlorophenoxy)-3,3-dimethyl-1-(1H-1,2,4-triazole-1-yl) butanone
22. triforine	N,N'-[1,4-piperazinediylbis(2,2,2-trichloro-ethylidene)]bisformamide

Table 2. Trade and brand names of products containing the chemical ingredients listed in Table 1, and the plants on which they can be used.

(T/O = Turf/Ornamental; V = Vegetable; F = Fruit)						
Common name/type	Product name	Brand	T/O	V	F
